Dran Magdaraog

Full-Stack Web Developer · BS Information Technology Student

dranrebdmagdaraog@gmail.com | Northern Samar, Philippines

LinkedIn – Dran | Facebook – Dran | Portfolio – Dran | GitHub – Dran

SUMMARY

IT student who builds and deploys full-stack web apps with React, TypeScript, Node.js and PostgreSQL, backed by automated tests and CI. Seeking an internship, OJT or junior web developer role.

TECHNICAL SKILLS

Languages	TypeScript, JavaScript, SQL, HTML, CSS
Frameworks	React, Node.js, Express, Socket.IO, Vite
Databases	PostgreSQL, MySQL
Testing & DevOps	Vitest, Supertest, GitHub Actions (CI), Git, Render, Vercel
Concepts	REST APIs, WebSockets, JWT authentication, responsive and accessible design, UX research
Tools	GitHub, Figma, Postman, VS Code, Android Studio

PROJECTS

Pila: Real-Time Queue System | *React, TypeScript, Node.js, Express, PostgreSQL, Socket.IO* 2026

pila-5gjs.onrender.com | github.com/Dran511/Pila

- Built a real-time queue system so people at health centers and government offices can get a number by QR code and wait anywhere, with a staff counter console, a TV display board and an admin dashboard.
- Pushed live updates to phones, staff screens and the TV with Socket.IO, sending full snapshots instead of changes so no screen can fall out of sync.
- Prevented double-calls with row-level locks in PostgreSQL transactions; tests confirm 25 simultaneous joins get 25 unique numbers and two counters never call the same person.
- Secured staff and admin roles (bcrypt, httpOnly JWT cookies, rate limiting), covered by 30 automated tests in GitHub Actions CI; deployed on Render with PostgreSQL.

Ipon: Budgeting Web App | *React, TypeScript, UX Research* 2026

ipon-chi.vercel.app | github.com/Dran511/Ipon

- Researched why people quit budgeting apps (5 competitor apps, analyses of 1,586 negative reviews) and redesigned Ipon around the findings, documented in an in-app case study.
- Centered the app on one "safe to spend" number with its math one tap away, so users can trust it.
- Cut first-time setup to about one minute and made logging fast (date shortcuts, tap to edit, undo); built in React and TypeScript with no UI or chart libraries.

EDUCATION

University of Eastern Philippines, Catarman, Northern Samar Expected 2028

Bachelor of Science in Information Technology
